

RaDAR's Matchmaking Platform – User Guide

RaDAR is proud to present its Matchmaking Tool to ensure and encourage collaboration between suppliers in order to reach tender requirements.

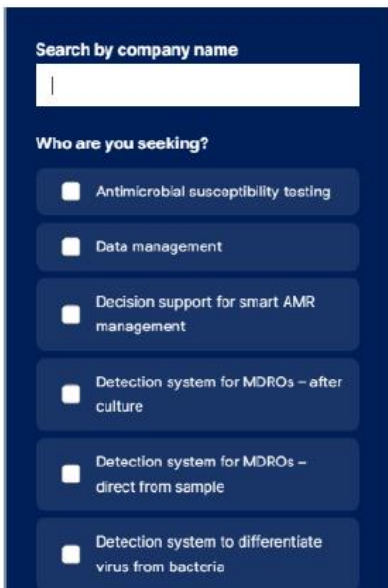

The platform has been developed in a way that is easy, quick and user oriented; the Consortium has developed this simple guide to help suppliers navigate the tool.

The first page you will see is the one displayed below:

Scroll down to see the existing profiles for different companies that have already completed the onboarding phase, companies are displayed in alphabetical order.

A dark blue search interface. At the top is a white search bar labeled "Search by company name". Below it is a section titled "Who are you seeking?" with six checkboxes and labels: "Antimicrobial susceptibility testing", "Data management", "Decision support for smart AMR management", "Detection system for MDROs – after culture", "Detection system for MDROs – direct from sample", and "Detection system to differentiate virus from bacteria".A light grey box representing a company profile. It contains several blue tags: "Data management", "Decision support for smart AMR management", "Information and communication systems", "Integrated solution for rapid detection and smart AMR management and control", and "Point of care testing". An orange tag "Private company" is also present. Below these, a "Seeking for:" section shows two green tags: "Data management" and "Information and communication systems", and a smaller green tag "Other".A light grey box representing a company profile. It contains several blue tags: "Data management", "Information and communication systems", and "Freelance". Orange tags include "Private company", "Public company", "Start up", and "Technological Center". Below these, a "Seeking for:" section shows a green tag "Antimicrobial susceptibility testing", and two more green tags: "Information and communication systems" and "Molecular detection of MDROc". A final green tag "Open platform" and "Smart AMR management and control systems" are also visible.

Each profile can have three types of tags in the form of text bubbles above the company name. The blue tags indicate the companies' field of expertise, the orange tag indicates the typology of enterprise, and the green tags show what the company is looking for in a business partnership specifically.

If your company is looking for a particular field of expertise, you can use the check boxes on the left to search for a match. You can select as many check boxes as you like and combine it with company typology if necessary. A search bar is also provided, at the top of the left column to enable searching for a company directly by name.

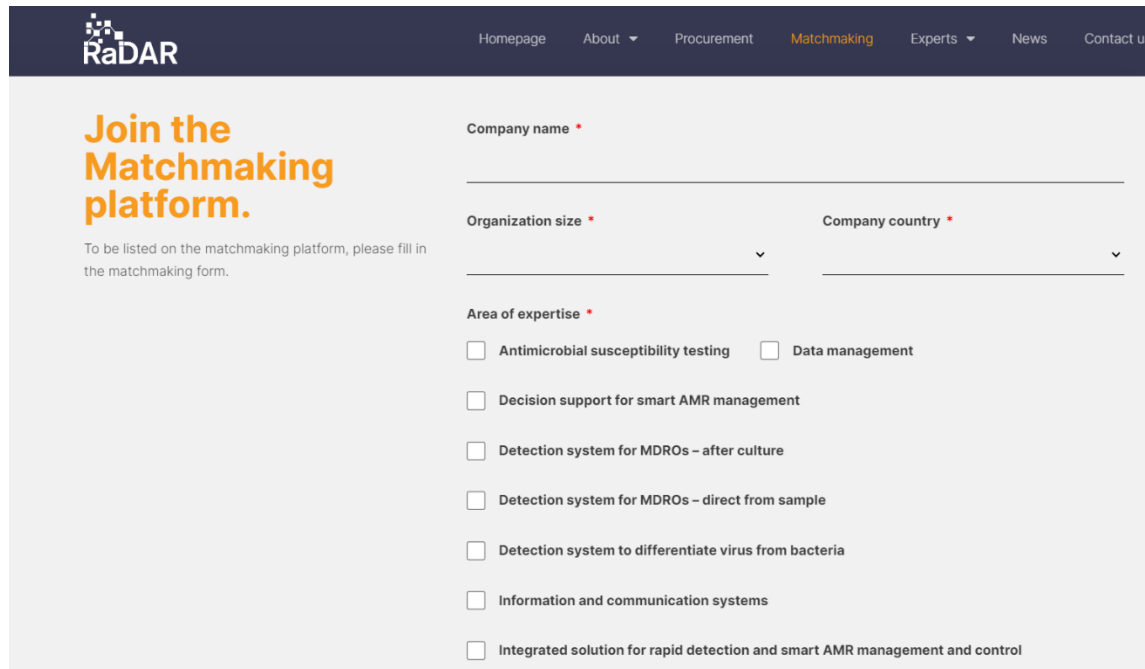

When you find a profile that could be a possible match, **click on it** and a more detailed profile page will open.

Users are provided with a more detailed description and additional information on what the company is seeking. This feature has been done to maximise fruitful exchanges between suppliers, but is optional. The contact information can be found at the **bottom of the page**, scroll down if necessary, in the left corner.

Be proactive! The Matchmaking Tool is a window through which suppliers can find successful partnerships, but connections and conversations start with you! Keep in mind that the platform keeps no record of a company's search history or created connections, and building a connection is entirely up to the suppliers.

How to create a profile on the Matchmaking Platform:

The screenshot shows the RaDAR Matchmaking Platform registration form. The header includes the RaDAR logo and navigation links: Homepage, About, Procurement, Matchmaking, Experts, News, and Contact us. The main heading is "Join the Matchmaking platform." Below this, a sub-heading reads: "To be listed on the matchmaking platform, please fill in the matchmaking form." The form fields are:

- Company name *
- Organization size *
- Company country *
- Area of expertise * (checkboxes):
 - Antimicrobial susceptibility testing
 - Data management
 - Decision support for smart AMR management
 - Detection system for MDROs – after culture
 - Detection system for MDROs – direct from sample
 - Detection system to differentiate virus from bacteria
 - Information and communication systems
 - Integrated solution for rapid detection and smart AMR management and control

In order to join the Matchmaking Platform, all you have to do is scroll to the bottom of the page and you'll find the onboarding form. All fields marked with a red asterisk (*) are mandatory, but as optional fields, feel free to add your social media links, a .pdf file presenting your company and/or a website link to complete the profile! There is no need to register, create a separate profile or request access to RaDAR's portal.

Make sure to **agree to the Privacy Policy** before you click send! A pop-up message will tell you if your profile creation has been successful. Users can click on the keyhole symbol on the bottom right corner of the page to read the privacy and cookie section of RaDAR's website. Profiles are **onboarded automatically** onto the platform once you click "Send", therefore if you need to modify, delete, or have any questions on the profile you have created, please contact us at the e-mail address: contact@radar-ppi.com

Matchmaking Tool User Terms and Regulations

In order to have a productive and peaceful matchmaking forum, users are required to follow the **rules of interaction** listed below:

Authenticity: All users must provide accurate and truthful information about their company, including their profile, services, and offerings.

Respectful Communication: Users must engage in respectful and professional communication, refraining from any offensive, abusive, or harassing language or behaviour.

Privacy Protection: The platform follows EU regulation privacy measures in place to protect the personal and sensitive data of its users, adhering to relevant data protection laws. Please note that administrators and other participants don't have any access to information on who is contacting who.

No Spamming: Users should not engage in excessive or unsolicited promotional activities, spamming, or solicitation of services unrelated to the platform's purpose.

Intellectual Property Rights: Users should respect the intellectual property rights of others and refrain from using or sharing copyrighted or proprietary information or products without explicit permission from the owner.

Compliance with Laws and Regulations: Users must comply with all applicable EU laws, regulations, and industry standards, ensuring that their activities on the platform are legal and ethical.

Suspension or Termination: In case of severe or repeated violations of the platform's rules, the administrators from RaDAR's consortium may choose to suspend or terminate the accounts of the offending users.
